DETAILED ACTION

Claims 1-25 are pending and subject to restriction requirement.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-11, drawn to a method for culturing non-pancreatic stem cells under conditions promoting pancreatic differentiation such as conditions promoting clustering and the use of medium with one factor selected from GLP-1, HGF and nicotinamide.

Group II, claim(s) 12-21, drawn to a method for treating patients by using the product of the culturing method.

Group III, claim(s) 22, drawn to a first product that is a transdifferentiated mesenchymal stem cell obtained by the culturing method.

Group IV, claim(s) 23, drawn to a second product that is a transdifferentiated mesenchymal stem cell that expresses mRNA for Isl-1, Pax-6, PP, insulin, glucagons and somatostatin.

Group V, claim(s) 24, drawn to a third product that is a transdifferentiated non-pancreatic stem cells obtained by the culturing method.

Group VI, claim(s) 25, drawn to a fourth product that is a composition with transdifferentiated mesenchymal stem cell encapsulated in an endocrine hormone permeable capsule.

The inventions listed as Groups I-VI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

This application contains claims drawn to more than one permissible combinations of invention categories such as more than one product, methods of making and using the product. Furthermore, the corresponding special technical feature, that is culturing non-pancreatic stem cells including mesenchymal stem cells under conditions promoting cell clustering or cell binding to tissue culture plates and in a medium comprising at least one claimed factor, is known in the prior art. For example: US 5,486,359 (IDS reference) teaches culturing non-pancreatic stem cells such as mesenchymal stem cells (see abstract, col. 7, line 41) under conditions promoting cell clustering or cell binding to tissue culture plates (col. 7, line 44) and in the medium BGJ comprising at least one factor such as nicotinamide (col. 8, line 35). For example: US 20020182728 (IDS reference) teaches culture methods for trans-differentiation of non-pancreatic stem cells into pancreatic cells (abstract).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not

distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
